The Lansing Chapter of Safari Club International

Presents to Northwoods Scout Reservation and the Chief Okemos Council Cub Scout Day Camp program:

The Genesis Compound Bow Youth Archery System

The Genesis Bow System: The Genesis System is a single cam compound bow with adjustable draw weight and no specific draw length. This is ideal for the variations in arm strength and the different sizes of the Scouts and leaders. It also reduces possible minor injuries that can occur by the newer less-experienced shooter using the existing re-curve bows. One of the best advantages of the Genesis Bow System is the fact that these bows make it easier for new shooters to shoot more accurately and achieve higher scores. One of the primary goals of the Scout program is that every boy can be an achiever. Using the Genesis Bow System will certainly help the Scout feel more like an achiever.

- Single cam compound bow
- Draw weight: adjustable from 10 to 20 pounds.
- Draw length: 15" to 30" @ same draw weight
- Percent let-off: Zero (patent pending)
- Axle-to-axle length: 36"
- Brace Height: 7 1/2"
- String length: 94 1/2"
- Power Cable Length: 37 1/4"
-

Also to be purchased are new aluminium or graphite arrows in lengths including 24", 26", 28", and 30", spined to match the bows' draw weight.
